

MANI SANDELA

Data Engineer | SQL Development | ETL/ELT | Data Pipelines | Data Warehousing
2487305508 | manisharan0902@gmail.com

PROFESSIONAL SUMMARY

Data Engineer with 5+ years of experience working with enterprise data, SQL development, ETL/ELT pipelines, relational databases, data warehousing, and analytics platforms. Strong hands-on experience with SQL/T-SQL, SQL Server, Oracle, Python, PySpark, Databricks, Snowflake, and Power BI. Skilled in building and maintaining reliable data pipelines, developing well-structured analytical datasets, optimizing queries, validating data quality, troubleshooting data-flow issues, and supporting reporting and analytics workloads. Experienced collaborating with business, development, and analytics teams to translate data requirements into scalable and maintainable solutions.

TECHNICAL SKILLS

SQL & Databases: SQL, T-SQL, SQL Server, Oracle, PostgreSQL, MySQL, Stored Procedures, Views, Joins, CTEs, Window Functions, Query Optimization, Relational Databases

Data Engineering: ETL/ELT, Data Pipelines, Data Integration, Data Transformation, Data Warehousing, Data Modeling, Schema Design, Source-to-Target Mapping

Cloud & Data Platforms: Databricks, Snowflake, AWS, Spark, PySpark, Spark SQL, Cloud Data Processing

Programming: Python, SQL, PySpark, Data Processing, Workflow Automation

Data Quality: Validation, Reconciliation, Data Profiling, Duplicate Detection, Exception Analysis, Data Integrity, Root Cause Analysis

Analytics & BI: Power BI, Tableau, DAX, Power Query, Analytical Datasets, Operational Reporting, KPI Reporting

Delivery: Agile/Scrum, Jira, UAT, Technical Documentation, Requirements Gathering, Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

Capital One | Data Analyst | Sep 2025 - Present

- Develop and maintain SQL-based datasets and data pipelines that collect, transform, validate, and organize enterprise data for reporting and analytical workloads.
- Write and optimize complex SQL/T-SQL queries using joins, CTEs, window functions, aggregations, and reusable business logic across relational data sources.
- Build data transformations and automated processing workflows using SQL and Python to improve reliability, repeatability, and accessibility of downstream data.
- Perform source-to-target validation, reconciliation, completeness checks, and exception analysis to ensure clean and reliable datasets.
- Investigate data pipeline failures, reporting discrepancies, and performance issues; perform root-cause analysis and coordinate resolution with technical teams.
- Support relational data modeling and analytical dataset design by translating business requirements into structured, documented data solutions.
- Partner with development, analytics, and business teams to provide trusted datasets for reporting, operational analysis, and downstream applications.
- Document data definitions, transformations, validation logic, dependencies, and operational procedures to support governance and maintainability.

Lawrence Technological University, Michigan | Library Student Assistant (Part-Time) | May 2024 - Dec 2025

- Maintained and validated structured operational records using Excel and Microsoft tools, ensuring accuracy, completeness, and consistent organization.
- Supported users with technology, systems, access, and information requests while troubleshooting issues and coordinating escalations.
- Managed multiple concurrent requests with strong attention to detail, documentation, communication, and data confidentiality.

Tata Consultancy Services | Data Analyst | Dec 2019 - Feb 2023

- Developed SQL-driven ETL and reporting workflows across SQL Server and Oracle environments to integrate, transform, and prepare enterprise data for analytics.
- Wrote complex SQL/T-SQL queries and reusable data logic using joins, CTEs, window functions, aggregations, views, and stored-procedure concepts.
- Built and maintained analytical datasets and data transformations supporting Power BI, Tableau, recurring reporting, and operational analytics.
- Performed data modeling and source-to-target mapping to organize relational data and support reliable downstream reporting and business use cases.
- Monitored and troubleshooted data-flow and query issues, investigated discrepancies, and performed root-cause analysis to improve reliability and performance.
- Performed data profiling, reconciliation, duplicate detection, and validation, improving reporting accuracy by 25%.
- Automated recurring data preparation and reporting workflows using SQL and Python, reducing manual effort by 40%.
- Partnered with business and technical teams to gather data requirements, validate outputs, support UAT, and document data definitions, mappings, and processing logic.

DATA ENGINEERING PROJECTS

- Enterprise ETL Pipeline:** Designed SQL/Python-based ingestion and transformation workflows to clean, standardize, validate, and load multi-source data into analytics-ready structures.
- Relational Data Modeling:** Structured normalized and analytics-oriented datasets with defined keys, relationships, validation rules, and documented source-to-target mappings.
- SQL Performance & Data Quality:** Developed reusable SQL validation and reconciliation checks and optimized query logic for reliable recurring analytics workloads.
- Databricks / Spark Processing:** Used Python, PySpark, Spark SQL, and Databricks concepts for scalable transformation and preparation of large analytical datasets.
- BI Data Layer:** Prepared governed datasets and business logic for Power BI dashboards and operational reporting, ensuring consistent KPI definitions and trusted outputs.

EDUCATION

Lawrence Technological University, Michigan | Master of Science - Information Technology | Specialization: Business Data Analytics | GPA: 3.8/4.0 | Aug 2023 - Dec 2025

CERTIFICATION

Databricks Certified Data Engineer Associate
